

# Eco-Friendly Chemicals For Building Cleaning

## 20 Litre Trade Range

Our chemicals use nano energy to do the work for you. Getting underneath algae, dirt, stains, and cement smears and loosening them off by breaking the surface tension.

Safe, stable, non-toxic, non-hazardous, pH neutral and environmentally friendly - no biocides, acids, alkalis, bleach, or sodium hypochlorite. Certified food-safe for humans and pets.

We are a family run business and look forward to helping with your cleaning challenges.

No PPE Needed

Safe In A Water Course

pH Neutral Cleaner
